

To Diana Bagrationi Foundation

Dear Ms. Bagrationi,

We would like to thank you for the invitation to participate in the charity event organized by your Foundation. Unfortunately, at this stage we are not able to accept this opportunity due to objective reasons. In the future we will do our best to take part in the event.

We decided to thank you in writing for all the support that your Foundation ^{provides} gives to Georgian children, especially we managed your contribution to start a very important research that allows us to improve diagnosis in children, specifically in relation to acute leukemia; this has already reflected positively on the treatment results.

Success of leukemia treatment cannot merely result from the efforts of the doctors; state, society, business sector and charity organizations play significant role in this as well.

The Government of Georgia has prioritized treatment of oncology/hematological diseases and as doctors we try our best to ensure for our oncology/hematology patients the treatment that is in line with the standards observed in the leading clinics of Europe and the United States.

It must be noted that at this stage in Georgia the quality of Leukemia and Lymphoma patients' management is higher than that of children suffering with solid tumors. This is why, together with the American experts from Dana-Farber Cancer Institute, we are now actively considering establishment of joint national centre; we believe that the engagement of our partners from the United States will further strengthen our cooperation and make it more efficient.

We hope to achieve great progress with the American professionals in the field.

We are very proud of those Georgians who work with us towards overcoming the challenges faced by leukemia patients.

We hope that with the support from Georgians living in the United States our cooperation with the colleagues from the US will become more effective and fruitful.

Once again, we thank you for the support that you give to our little patients.

God Bless!

Oncology/ hematology Department of M. Iashvili Children's Hospital

Director, Prof. Asmat Shengelaia

Deputy Director, Doctor of Medicine, Tamar Javakhadze
